12	8	16	
13	5	8	
14	0	0	

Comments: This sprint was interesting because our burn-down chart reflects a different development strategy we implemented. In previous sprints we would schedule a planned development time period (usually on a weekend) where we would meet and complete necessary tasks. This sprint however we decided that instead we would try to chip away at some minor tasks throughout the week and then collaborate on some of the more heavily weighted tasks during our planned meetings held each weekend. This is why days like 6-7 and 12-14 sharply degrade whereas in between there are always some smaller tasks being completed.

Sprint 4 Burndown
